

WINE EXPORT APPROVAL REPORT*

DECEMBER 2001

Largest increment yet for a calendar year

Australian wine exports grew to new records in 2001 with the volume growing 21% over the previous year to reach 375 million litres and the value growing 19% to reach \$A 1.76 billion. Growth of the export volume in 2001 represented resurgence in growth with an additional 64 million litres over 2000 sales being sold in 2001, topping the previous highest increment, of 59 million litres, two years ago in 1999 followed by an increment of 53 million litres last year. On the other hand, the value increment was less in 2001 than in either of the two preceding years, at an additional \$A 280 million in 2001 compared to an additional \$A 290 million last year and an additional \$311 million in 1999. While the industry is still forging new records in the value of export sales, the smaller value increment in 2001 was due to a 1.5% decline in the average dollar-per-litre value of the wine sold in 2001.

Two-thirds of the additional 64 million litres sold in 2001 was accounted for by the growth of still red wine sales and the remaining third by the growth of still white wine sales. A comparison of sales increments in 2001 to those in 1999, the previous biggest year of incremental growth (see table *Australian wine exports, by style and container type*), shows that an additional 32 million litres of bottled red wine was sold in 2001 compared to an additional 30 million litres in 1999 while in 2001, an additional 11 million litres of red wine in other containers (in major part as bulk wine shipments) was sold compared to a much smaller increment in 1999, at 2 million litres. In the case of white still wine, 16 million litres more bottled white wine was sold in 2001 while the increment for this category in 1999 was 22 million litres and white wine in other containers grew by 6 million litres in 2001 compared to growth by 2 million litres in 1999.

Comparative MAT performances
MAT December 2001 compared with MAT December 2000

*MAT - Moving Annual Total

Reflecting growth in both bottled and bulk shipments in 2001, sales in the period grew strongly in two separated price segments– the lowest (<\$A 2.50) and the mid-range (\$A 5 to \$A 7.49) price segments. The volume of wine sold in the <\$A 2.50 price segment grew by 45% to reach 74 million litres sold into this price bracket representing a 20% share of the total volume sold in 2001 - 4 percentage points up on the share in the previous year. The \$A 5 to \$A 7.49 price segment grew by 44% to reach 112 million litres sold in this price bracket and represented a 30% share of the total volume of sales, 5 percentage points up on the share in the previous year.

The United Kingdom and the United States continued to be the two top export destinations for Australian wine in 2001. In 2001, sales to the UK grew 22% to reach 183 million litres and 21% in value to reach \$A 762 million while the US grew 31% in volume to reach 78 million litres and 20% in value to reach \$A 457 million. Together, the UK and US accounted for just over 80% of the 64 million litre increment in sales in 2001 and 70% of the total volume of overseas sales. In terms of the value of sales, the UK and US accounted for 75% of the \$A 280 million litre increment in 2001 and 70% of the total value of sales for the year.

While New Zealand was the third biggest destination for Australian wine by volume, growing 14% in 2001 to reach 23 million litres – Canada was the third biggest destination by value, growing 19% to reach \$A 106 million. The difference between third biggest destination by volume compared to value reflected the higher proportion of premium still wine in the export mix to Canada (87% bottled still wine by volume) compared to New Zealand (48% bottled still wine by volume).

Measured in percentage terms, France was Australia's strongest growing market in both volume and value in 2001. The volume of sales to France grew 94% to reach 5 million litres while the value of sales grew 136% to reach \$A 16 million – reflecting a 22% increase in the average dollar-per-litre value of sales to this destination to reach an average value per litre of \$A 3.17. The growth of Australian wine sales to France elevated it from thirteenth position on a list of Australia's major volume markets in 2000, to tenth in 2001. Growth of sales to France largely reflect its role as a destination for Australian wine to be trans-shipped for final consumption in other European countries. In 2001, the larger share of wine shipped to France was in bulk, at 59%, reflecting the role France plays as a destination for bottling Australian wine. Nevertheless, there has been a significant shift towards bottled wine shipped to France in 2001. One year ago, 21% of Australian wine shipments to France were bottled still wines while at the end of 2001, the share had increased to 40%.

Notes. '%' represents shares of all wine exported to each country. 'Change in Share' represents percentage point change in share between the current twelve month period (MAT) compared to the preceding twelve month period.

Notes & Definitions

<i>Export approvals</i>	Wine approved by the Australian Wine & Brandy Corporation (AWBC) for export on specified dates. Exports reported in this document refer to the date wine is shipped and not the date of approval. Note that the \$A FOB value of wine reported in this document may differ from export values reported by the Australian Bureau of Statistics (ABS). The divergence between the two values derives from differences between the AWBC and ABS in the method of converting the value of exports denominated in foreign currency to \$A. In the case of the AWBC, the exporter makes the conversion when submitting wine for export approval while the ABS converts the value on the day of shipment, at the daily conversion rate. With the AWBC method, it is expected that some of the conversions will occur at hedged rates while this does not occur with the ABS method. When the Australian exchange rate is moving significantly the alternative methods will result in diverging valuations. Volumes reported by the AWBC and ABS differ only marginally due the approval versus shipment basis of reporting and marginal differences in scope and definition.
<i>MAT</i>	Moving Annual Total - refers to the twelve months ending with the nominated month.
<i>MAT % Change</i>	Is calculated as the percentage change in the MAT for the immediate past 12 months compared to the preceding 12 months. Formula: $MAT \% \text{ Change} = ((\text{current MAT} - \text{preceding MAT}) / \text{preceding MAT}) \times 100$
<i>Value/Litre (\$ per litre)</i>	Value/litre is calculated by dividing value (A\$ FOB) by volume (litres).
<i>ML</i>	Millions of litres
<i>\$A</i>	Australian dollars
<i>FOB</i>	'Free on board' value of the wine, where the point of valuation is where goods are placed on board the international carrier, at the border of the exporting country. The FOB value includes production and other costs up until placement on the international carrier but excludes international insurance and transport costs.
<i>Country</i>	In most instances, this indicates where the wine is consumed. In some instances, it may be the country at which the wine is off-loaded for bottling and/or trans-shipment to the country of final consumption.
<i>Regions</i>	Between reports written from November 2000 onward and those prepared prior to this time, marginal changes have occurred in allocation of countries to regions meaning there will be a break in the series of regional totals.
<i>Table wine</i>	Still wine in bottles, casks, flagons or bulk containers.
<i>Bulk</i>	Wine exported in large shipping containers of size ranging between 10 000 and 24 000 litres.
<i>Casks or Soft Packs</i>	Plastic containers within cardboard outers usually carrying between 2 and 20 litres.
<i>Flacons</i>	Glass containers holding 2 litres or more.
<i>Bottles</i>	Glass containers holding less than 2 litres.
<i>Red wine</i>	Still red table wine. Amounts reported may or may not include both dry red wine and rose – footnotes and the reporting context should be consulted for interpretation.
<i>White wine</i>	Still white table wine. Amounts reported may or may not include both dry and sweet white wine – footnotes and the reporting context should be consulted for interpretation.
<i>Fermented Sparkling/ Champagne</i>	Sparkling wine in which the effervescence is produced naturally through secondary fermentation in the bottle.

Detailed reports

Reference code	Breakdown of information	Period		
AWBC1	Summary of volumes approved, by container type and wine style	Current month	Financial year to date	Last 12 months
AWBC2	Volumes and values approved, by country	Current month	Financial year to date	Last 12 months
